

October 6, 2009

To our Valued Customers:

LRI Perforating Systems Inc. is pleased to announce that effective October 1, 2009, we have been acquired by DYNAenergetics NA, LLC., a wholly owned subsidiary of Dynamic Materials Corporation (DMC) (NASDAQ: BOOM). DYNAenergetics has been our long-standing strategic partner, supplying LRI with explosives, and distributing LRI goods in international markets.

Since 2002 LRI has worked hard to supply Western Canada's energy and E-line service companies' perforating requirements. We thank you for your support through the past 7 years and trust that our people and products have achieved the highest standards, providing you with the peace of mind you require when selecting perforating products.

DYNAenergetics has a long and distinguished history in engineered explosive solutions, and has been a leader in oilfield detonators, cords, and shaped charges since the early 1990's. As a customer, you may be familiar with some of these technologies including the Multitronic RF Safe / Select Fire system and the DPEX line of reactive liner shaped charges.

Our team remains committed to providing you with the highest level of service, industry leading product technologies, and an assurance of quality and performance. This development, combining the strengths of both companies, will better enable us to provide comprehensive solutions to our customers' perforating challenges, both domestically and internationally.

Our new parent company, Dynamic Materials Corporation (DMC), is a leading international metalworking company based in Boulder, Colorado. Its products include explosion-welded clad metal plates and other metal fabrications for use in a variety of industries, including oil and gas, petrochemicals and alternative energy. DMC operates three business segments: Explosive Metalworking, which uses proprietary explosive processes to fuse different metals and alloys; Oilfield Products, which manufactures, markets and sells specialized explosive components and systems used to perforate oil and gas wells; and AMK Welding, which utilizes various technologies to weld components for use in power-generation turbines, as well as commercial and military jet engines.

Please feel free to contact myself, or your account manager, should you have any comments or concerns.

Again, we would like to thank you for your continued support; we look forward to serving you well into the future.

Sincerely,

LRI Perforating Systems Inc.
